DawaiSathi: Mending the **Broken Chain of Medication Care**

THE FRAGILE REALITY OF "THE BROKEN CHAIN"

Systematic Information Degradation: Medical intent erodes from illegible handwriting to verbal shorthand.

The Throughput Crisis: Doctors have only 3.5 minutes per patient, leaving zero time for critical medication counseling.

The Invisible Architecture of Care: Scale of the Challenge

100M+

Patients: Rely on fragile, informal family-managed medication systems.

Caregivers: Manage complex dosages (often 10+) without medical training or literacy tools.

Pharmacists: Use manual workarounds like marker pens that smudge or get cut off.

Informal Systems Fail Under Pressure: Home-made sorting systems collapse during generic medicine substitutions or distractions.

DAWAISATHI: A DIGITAL PUBLIC GOOD

A Durable Layer of Digital Memory: An open-source tool uses photos, color-coding, and nudges to assist low-literacy users.

Designed for Extreme Accessibility: Engineered for ₹8,000 phones, offline-firat functionality, and cultural adaptation in 22 languages.

Call for Multi-Disciplinary Building: Requires AI for Indic-OCR, UX for low-literacy users, and ethnography for real-world testing.
